## BAY STREET PROJECT:

This project involves a new garden and irrigation system in the front yard, front parkway and along the driveway. The home was remodeled a few years ago and landscaping was never completed. The client wishes to have a low maintenance landscape that is fragrant and supports a natural habitat. The client also asked to have the plans submitted for the Santa Monica Sustainable Landscape Grant program for possible funding. This was possible due to low water using plants and a drip irrigation plan. Currently those plans are being reviewed by the city and the garden will be installed in the spring. Plants include *Carex divulsa*, *Arbutus unedo* 'Oktoberfest', *Euphorbia characia* 'Bruce Dwarf', *Lavandula stoechas* 'Winter Bee', *Leymus condensatus* 'Canyon Prince', *Ribes sanguineum* 'Spring Showers', *Salvia clevelandii* 'Winnifred Gilman', *Salvia spathacea*, *Verbena lilacina* 'De la Mina', *Zauschneria* 'Everett's Choice', *Iris* species and *Agave* 'Blue Flame'. The parkway consists of *Dymondia margaretae* and various *Echevarias* and *Aeonium*s.
